Moscow Exchange Indices are the leading benchmarks of the Russian organized securities and derivatives markets. The equity indices are capitalization-weighted indices. They are calculated based on the total market capitalization of constituent stocks divided by the total market capitalization of these stocks at the initial date.

MICEX Index is a composite index of the 30 most liquid stocks of the largest and dynamically developing Russian companies from the major sectors of the Russian economy. The Index is calculated using ruble-denominated prices for the constituent stocks.

RTS Index is a broad-based index calculated on the basis of prices of 50 liquid shares of the most highly capitalized Russian companies. This allows it to reflect precisely the entire Russian cash equity market. The Index is computed from the US dollar-denominated prices.

Cap Indices are market-capitalization weighted indices comprised of the most liquid stocks of Russian issuers:

MICEX LC (MICEX Large Cap Index) contains the top companies as measured by market capitalization.
 MICEX MC (MICEX Mid Cap Index) contains companies with market capitalization ranked lower than for the top companies.
 MICEX SC (MICEX Start Cap Index) contains companies with small capitalization.

Sectoral Indices reflect the movements of prices in a given sector of the economy represented in the Russian stock market. They usually include 10 to 20 liquid shares of the most highly capitalized Russian issuers belonging to this sector.

MICEX O&G (RTSog) comprises stocks of oil & gas companies.
 MICEX PWR (RTSeu) comprises stocks of power companies.
 MICEX TLC (RTStl) comprises stocks of telecommunication companies.
 MICEX M&M (RTSmm) comprises stocks of companies of metals and mining industry.
 MICEX MNF (RTSin) comprises stocks of companies of mechanical engineering industry.
 MICEX FNL (RTSfn) comprises stocks of banks and financial companies.
 MICEX CGS (RTScr) comprises stocks of companies of consumer & retail sector.
 MICEX CHM comprises stocks of companies of chemical and petrochemical industry.

Values of the sectoral indices are presented in rubles and in US dollars. Historical values of the MICEX sectoral indices are served as a history for ruble-denominated indices, whereas historical values of the RTS indices are used as a history for dollar-denominated indices.

Regional Indices are equity indices designed to include stocks admitted to trading in Moscow Exchange, selected on the basis of liquidity and capitalization with issuers operating primarily in the specific federal district of the Russian Federation. At the moment, the information on the RTS Siberia Index, with constituent stocks of companies from the Siberian Federal district, is available.

RTS Standard Index is an indicator that tracks performance of the so called blue chips. It is calculated from ruble-denominated prices and bids for 15 top liquid stocks of the Russian cash equity market.

MICEX Innovation Index is a capital-weighted price index comprised stocks of Russian companies traded on the Innovations and Investments Market.

The Russian Volatility Index is an aggregated indicator which reflects the average value of implied volatility of the options on RTS Index futures contract. To calculate values of the Index the Black-Scholes option pricing formula is applied.

The Bond Indices are the family of MICEX Bond Indices consists of the Russian Government Bond Index (RGBI), MICEX Corporate Bond Index (MICEX CBI) and MICEX Municipal Bond Index (MICEX MBI). The Indices were designed to measure the performance of the various segments of the Russian bond market. The Bond Indices are calculated by three methods concurrently: "total return", "clean price" and "gross price" method. In addition, duration and yield to maturity are calculated based on the Indices constituent lists.

The repo rate indicators are calculated to evaluate Russian organized repo market condition. The Indicators are computed separately for the stock repo market and bond repo market. Trades in shares included in the MICEX Index constituent list and trades in bonds included in the Bank of Russia's Lombard list are used to calculate the Indicators. There are overnight, one-week and two-week repo rate indicators that are determined based on settlement periods of relevant repo transactions.
