The Russian Government Bond Index (RGBI) was up 0.43% to 132.57 points last week (132.00 points as of August 31, 2012). RGBI total return value added 0.57% to 294.37 points. The average return value of the MICEX Government Bond Index lost 12 basis points and amounted to 7.39%.

The Municipal Bond Index (MICEX MBI TR) showed the positive trend and reached 161.24 basis points growing by 0.23% (160.87 as of August 31, 2012).

The total return value of the MICEX Corporate Bond Index (MICEX CBI TR) was up 0.12% to 217.08 points; while the clean price value of the index reached 92.07 points, losing 0.04%. The weighted average return value grew by 9 basis points to 8.77%.

The conservative investment strategy tracking the last week's pension index could have resulted in a weekly gain of 0.09% per week. The aggressive investment strategy based on the pension index could have brought a weekly profit of 1.69% per week.

The bond overnight repo rate was down 10 basis points (5.37% to 5.27%). The equity overnight repo rate lost 5 basis points to 4.96% in value.

Index Derivatives

For the week of September 3-7, 2012 the total trading volume in index futures and options on the FORTS derivatives market equaled RUB643.59 billion representing 7.06 million contracts.

Last week's trading volume for the most liquid contract on FORTS, futures contract on the RTS Index, amounted to RUB568.04 billion representing 6.23 million contracts.

The RTS Index futures contract traded in backwardation last week. By the end of the week the RTS Index gained 5.91%, while the September and December futures contracts went up by 6.42% and 6.33% respectively.

The total investor's open interest measured in RTS Index futures increased by 23.73%

During the week, FORTS trading volume in futures contract on the MICEX Index was RUB2.33 billion representing 16.04 thousand contracts. Open interest in the contract on the MICEX Index increased by 8.18% for the week.

Trading volume in options on RTS Index futures totaled RUB71.56 billion representing 791.23 thousand contracts. Open interest of RUB101.81 billion or 1.19 million contracts was fixed. Call options made up 55.66% of the total open interest for these contracts. The 150.000 strike calls and 140.000 strike puts had the highest open interest.

The total investor's open interest measured in options on the RTS index futures increased by 9.14%.

Moscow Exchange Indices are the leading benchmarks of the Russian organized securities and derivatives markets. The equity indices are capitalization-weighted indices. They are calculated based on the total market capitalization of constituent stocks divided by the total market capitalization of these stocks at the initial date.

MICEX Index is a composite index of the 30 most liquid stocks of the largest and dynamically developing Russian companies from the major sectors of the Russian economy. The Index is calculated using ruble-denominated prices for the constituent stocks.

RTS Index is a broad-based index calculated on the basis of prices of 50 liquid shares of the most highly capitalized Russian companies. This allows it to reflect precisely the entire Russian cash equity market. The Index is computed from the US dollar-denominated prices.

Cap Indices are market-capitalization weighted indices comprised of the most liquid stocks of Russian issuers:

MICEX LC (MICEX Large Cap Index) contains the top companies as measured by market capitalization.
MICEX MC (MICEX Mid Cap Index) contains companies with market capitalization ranked lower than for the top companies.
MICEX SC (MICEX Start Cap Index) contains companies with small capitalization.

Sectoral Indices reflect the movements of prices in a given sector of the economy represented in the Russian stock market. They usually include 10 to 20 liquid shares of the most highly capitalized Russian issuers belonging to this sector.

MICEX O&G (RTSog) comprises stocks of oil & gas companies.
MICEX PWR (RTSeu) comprises stocks of power companies.
MICEX TLC (RTStl) comprises stocks of telecommunication companies.
MICEX M&M (RTSmm) comprises stocks of companies of metals and mining industry.
MICEX MNF (RTSin) comprises stocks of companies of mechanical engineering industry.
MICEX FNL (RTSfn) comprises stocks of banks and financial companies.
MICEX CGS (RTScr) comprises stocks of companies of consumer & retail sector.
MICEX CHM comprises stocks of companies of chemical and petrochemical industry.

Values of the sectoral indices are presented in rubles and in US dollars. Historical values of the MICEX sectoral indices are served as a history for ruble-denominated indices, whereas historical values of the RTS indices are used as a history for dollar-denominated indices.

Regional Indices are equity indices designed to include stocks admitted to trading in Moscow Exchange, selected on the basis of liquidity and capitalization with issuers operating primarily in the specific federal district of the Russian Federation. At the moment, the information on the RTS Siberia Index, with constituent stocks of companies from the Siberian Federal district, is available.

RTS Standard Index is an indicator that tracks performance of the so called blue chips. It is calculated from ruble-denominated prices and bids for 15 top liquid stocks of the Russian cash equity market.

MICEX Innovation Index is a capital-weighted price index comprised stocks of Russian companies traded on the Innovations and Investments Market.

The Russian Volatility Index is an aggregated indicator which reflects the average value of implied volatility of the options on RTS Index futures contract. To calculate values of the Index the Black-Scholes option pricing formula is applied.

The Bond Indices are the family of MICEX Bond Indices consists of the Russian Government Bond Index (RGBI), MICEX Corporate Bond Index (MICEX CBI) and MICEX Municipal Bond Index (MICEX MBI). The Indices were designed to measure the performance of the various segments of the Russian bond market. The Bond Indices are calculated by three methods concurrently: "total return", "clean price" and "gross price" method. In addition, duration and yield to maturity are calculated based on the Indices constituent lists.

The repo rate indicators are calculated to evaluate Russian organized repo market condition. The Indicators are computed separately for the stock repo market and bond repo market. Trades in shares included in the MICEX Index constituent list and trades in bonds included in the Bank of Russia's Lombard list are used to calculate the Indicators. There are overnight, one-week and two-week repo rate indicators that are determined based on settlement periods of relevant repo transactions.
