The total trading volume in index futures and options on Moscow Exchange's Derivatives Market in August 2017 was RUB 1,749.56 bln, or 14.70 mln contracts.

Last month's trading volume in RTS Index futures, which is one of the most liquid contract on FORTS, was RUB 1,285.69 bln, or 10,41 mln contracts.

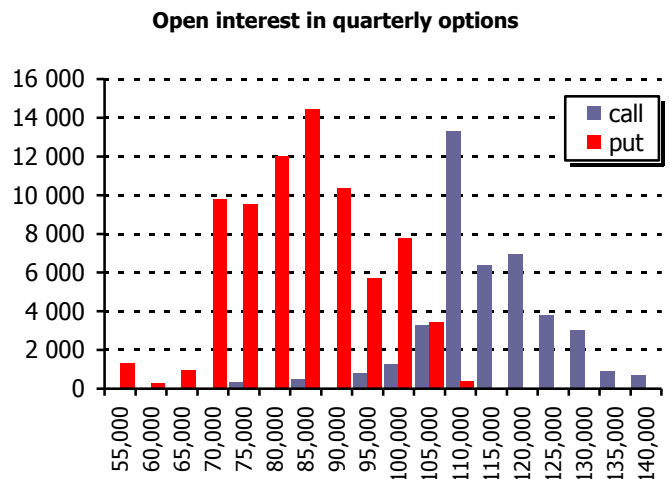

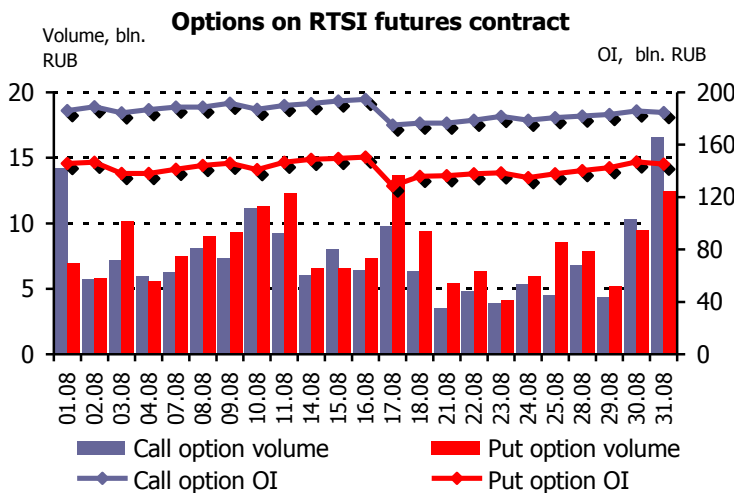

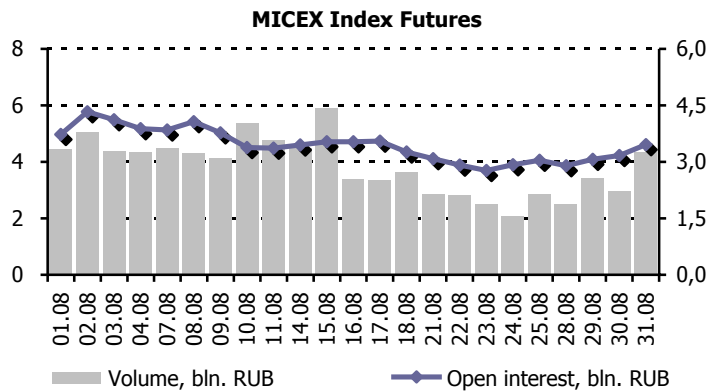

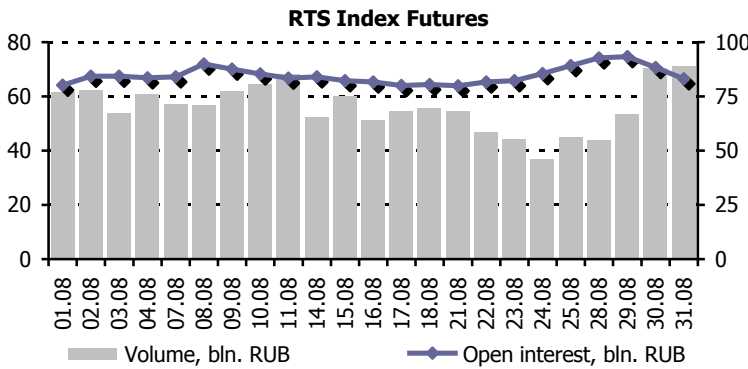

The RTS Index futures contract traded in backwardation last month. The RTS Index rose 8.81% MoM, while the September and the December futures were up a respective 7.83% and 7.66%.

Open interest in RTS Index futures increased 1.28%.

Turnover in MICEX Index futures was RUB 88.25 bln, or 446.70 thousand contracts. Open interest in MICEX Index futures decreased 7.28%.

The trading volume in options on RTS Index futures totaled RUB 358.56 bln. or 2.97 mln contracts. Open interest was RUB 329.73 bln. or 2.83 mln contracts. Puts made up 44.02% of the total open interest. The 110.000 strike calls and 85.000 strike puts had the highest open interest.

The open interest in options on RTS index futures rose 8.25%.

August 2017

Moscow Exchanges Indices are key indicators of the Russian organized securities and derivatives market. Moscow Exchange Indices responds with the Principles for Financial Benchmarks (the IOSCO Principles), published by the International Organization of Securities Commissions (IOSCO) in July 2013. The compliance was confirmed by the Ernst & Young company during the audit.

The MICEX and RTS Indices are Russian stock market composite indices that include the 50 most liquid stocks of the largest and most dynamically developing Russian issuers. The MICEX Index is calculated based on the stock prices denominated in RUB. The RTS Index is calculated based on the stock prices denominated in USD.

Sectoral indices are capitalisation weighted indices calculated based on prices of the most liquid local sector shares. Moscow Exchange has indices for nine sectors:

- MICEX O&G (RTSog) comprises stocks of oil & gas companies.
- MICEX PWR (RTSeu) comprises stocks of utilities companies.
- MICEX TLC (RTStl) comprises stocks of telecoms companies.
- MICEX M&M (RTSmm) comprises stocks of metals & mining companies.
- MICEX MNF (RTSin) comprises stocks of manufacturing companies.
- MICEX FNL (RTSfn) comprises stocks of banks and financial companies.
- MICEX CGS (RTScr) comprises stocks of consumer & retail companies.
- MICEX CHM (RTSch) comprises stocks of chemicals companies.
- MICEX TRN (RTStn) - comprises stocks of transport companies.

Values of the sectoral indices are presented in RUB and USD. MICEX sectoral indices' historical values provide historical values for rouble denominated indices, while the RTS indices' historical values provide them for dollar-denominated indices.

The MICEX Blue Chip Index is an indicator that tracks blue chips' performances. It is calculated from rouble denominated prices and bids for the 15 most liquid Russian stocks.

The MICEX10 is an unweighted price index calculated as the average of price fluctuations of 10 most liquid stocks admitted to trading on the exchange. The index tracks the increase in the value of a portfolio comprising 10 stocks with the same initial weights.

The Second-Tier Index is an indicator that tracks the performance of stocks issued by small and mid cap companies. The index includes 50 securities with free floats ranked by market cap behind the stocks in the MICEX Index and RTS Index's unified constituent list. The Index is calculated based on USD and RUB denominated stock prices.

The Broad Market Index includes the top 100 shares by liquidity, market cap, and the proportion of shares in free float. The Index's list of securities is used as the basis for the constituent list of other Moscow Exchange indices. The top 50 stocks in the Broad Market Index list are used to calculate the MICEX Index and RTS Index, and the bottom 50 to calculate the Second Tier Index. Sectoral indices baskets comprise relevant names in the Broad Market Index.

The MICEX Innovation Index is a capitalization weighted price index comprising Russian stocks traded on the Innovations and Investments Market.

Regional Indices are equity indices designed to include stocks admitted to trading on Moscow Exchange, selected based on liquidity and capitalization, with issuers operating primarily in a specific region of Russia. Information on the MICEX Siberia Index, comprising stocks of companies from the Siberian federal district, is currently available.

Moscow Exchange SMID Indices are free float-adjusted cap-weighted composite indices calculated based on the prices of the small and medium capitalization stocks listed in Russia.

The Russian Volatility Index is an aggregated indicator which reflects the average value of implied volatility of options on RTS Index futures. The Black Scholes model is used to calculate the index's values.

The Bond Indices are Corporate, Government and Municipal Bond Indices segmented by bonds duration and credit quality. The Bond Indices are calculated concurrently by total return and clean price methods. In addition, duration and YTM are calculated based on the index constituent lists.

The repo rate indicators are calculated to evaluate Russian organized repo market conditions. They are calculated separately for the stock and bond repo markets. Trades in shares in the MICEX Index and in bonds included on the CBR's Lombard list are used to calculate the indicators. There are overnight, one-week, and two-week repo rate indicators.
