The FX and Precious Metals Market order parameters, reporting documents and trading modes

1. Parameters of orders

- 1.1. Average allowed number of actions* performed per second in the trading system with the use of an individual trader's code during a 5-minute period -150.
- 1.2. Average allowed number of error messages generated per second in the trading system in case of erroneous actions performed with the use of an individual trader's code during a 5 minute period 150.
- 1.3. Orders from the algorithmic package of orders are submitted to the Trading System with a minimum frequency of 1 sec. The maximum number of orders in the algorithmic package of orders is 59,999.
- 1.4. Minimum allowed number of lots specified in a hidden order as lots to be displayed in the current quotes window -1,000.
- 1.5. Maximum allowed ratio of hidden lots to lots displayed in the current quotes window for a hidden order -100:1.
- 1.6. An artificial delay determined randomly may occur for an order in USDRUB_TDB, USDRUB_TMB, EURRUB_TDB and EURRUB_TMB in the period from the moment the order is entered into the MOEX's facility to its registration in the trading system. The delay may be from 1 to 100 milliseconds as determined by the competent body of Moscow Exchange.
 - An artificial delay determined randomly may occur for an order in TRYRUB_TOD, TRYRUB_TOM for order book limit orders in the period from the moment the order is entered into the MOEX's facility to its registration in the trading system. The delay may be from 1 to 1000 milliseconds as determined by the competent body of Moscow Exchange.
- 1.6.1. The message to cancel an order ('cancel' transaction) may be sent to the MOEX's facility only after the order is registered in the trading system. Randomly determined artificial delays are not applied to 'cancel' transactions.
- 1.7. The volume of the order (in lots) from the algorithmic package of orders is determined in accordance with the following order:
 - 1.7.1. Functions used:
 - Round function of mathematical rounding to a given rounding order;
 - Floor (Ceil) functions of rounding down (up) to the specified rounding order;
 - Random function of sampling a random variable from a range;
 - Min (Max) minimum (maximum) value sampling functions.
 - 1.7.2. Remaining volume of the algorithmic package of applications for the i-th iteration:

$$Vrem_i = V - \sum_{j=1}^{i-1} Vfact_J$$
,

where $Vfact_j$ – the volume actually executed when placing a related order at the j-th iteration. At iteration i=1 $Vrem_i = V$.

1.7.3. Planned number of iterations remaining until the completion of the algorithm (including the current iteration i):

$$M_i = Min\left(N - i + 1, Floor\left(\frac{Vrem_i}{Vmin}\right)\right)$$

1.7.4. Average order volume from the algorithmic package of orders:

^{*} Action performed in the trading system with the use of an individual trader's code shall mean submission, withdrawal and modification of orders.

$$Vav_i = Floor \left(\begin{cases} M_i = 0 : Vrem_i \\ M_i \neq 0 : \frac{Vrem_i}{M_i} \end{cases} \right)$$

1.7.5. The minimum order volume from the algorithmic package of orders:

$$Vmin_{i} = \begin{cases} Vav_{i} = 0:0 \\ Vav_{i} \neq 0:Max\left(Floor\left(Vav_{i} \times \left(1 - \frac{K_{r}exp}{2}\right)\right),Vmin\right), \end{cases}$$

where $K_r exp = \frac{e^{K_r - 1}}{e^{-1}}$ - the amount of random rejection of an application from an algorithmic package of orders.

1.7.6. Maximum order volume from the algorithmic package of orders:

$$Vmax_i = Ceil\left(Vav_i \times \left(1 + \frac{K_rexp}{2}\right)\right)$$

1.7.7. Random order volume from the algorithmic package of orders:

$$Vrand_i = Random(Vmin_i, Vmax_i)$$

Range boundaries are included.

With a uniform distribution $(K_r = K_r exp = 0) Vrand_i = Vav_i$ always.

1.7.8. Normalization by the minimum balance (it is guaranteed to leave the volume Vmin for each subsequent iteration of the algorithmic package - provided that all orders from it will be fully executed in the Trading System):

$$Vmin\ rem_i = Min \big(Vrand_i, Vrem_i - Vmin \times Max(M_i - 1, 0) \big)$$

1.7.9. Addition of the remainder (if, as a result of the execution of the i-th iteration (subject to the complete execution of the order in the Trading System), the volume < Vmin remains in the algorithmic package, then the remainder is added to the volume of the current iteration):

$$Vadd_i = \begin{cases} Vrem_i - Vmin \ rem_i \ \geq Vmin : Vmin \ rem_i \\ Vrem_i - Vmin \ rem_i \ < Vmin : Vrem_i \end{cases}$$

1.7.10. The final calculation of the order volume from the algorithmic package of orders, scheduled for input at the i-th iteration:

$$Vplan_i = egin{cases} Vadd_i \geq Vmin: Vadd \ Vadd_i < Vmin: 0 \end{cases}$$

- $\label{eq:Vplan} \textit{Vplan}_i = \begin{cases} \textit{Vadd}_i \geq \textit{Vmin}: \textit{Vadd}_i \\ \textit{Vadd}_i < \textit{Vmin}: 0 \end{cases}$ When entering the parameters of the algorithmic package, the trading participant has the right to indicate the coefficient of random rejection of orders from the algorithmic package of orders by the time of their entry and volume $-K_r = 0, ..., 1$ with step 0,1, where
 - 0 no deviations (even distribution of applications by time of entry and volume);
 - 1 maximum deviation ($\pm 50\%$ of the calculated mean time interval and the calculated mean volume - Vav_i).

The amount of random rejection of orders is calculated as follows:

$$K_r exp = \frac{e^{K_r-1}}{e^{-1}},$$

where $K_r exp$ – random rejection of applications,

 K_r – coefficient of random rejection of orders set by the Trading Member (0, ..., 1),

 e^x – exponent of a given number.

From 7:00 to 10:00 of the main trading session for CETS and SDBP Codes of trading modes for market orders types of "fill or kill" and "withdraw balance", sets a maximum control value deviation from allowable counter order, standing in line at the time of the filing of such market bids for instruments:

Instrument	Maximum deviation
USDRUB_TOD, USDRUB_TDB, USDRUB_TOM,	
USDRUB_TMB, USDRUB_TMS, USDRUB_SPT	
EURRUB_TOD, EURRUB_TDB, EURRUB_TOM,	
EURRUB_TMB, EURRUB_TMS, EURRUB_SPT	
EURUSD_TOD, EURUSD_TOM, EURUSD_SPT	0,50%
GBPUSD_TOD, GBPUSD_TOM, GBPUSD_SPT	
USDCNY_TOD, USDCNY_TOM, USDCNY_SPT	
CNYRUB_TOD, CNYRUB_TOM, CNYRUB_SPT	
USDCHF_TOD, USDCHF_TOM, USDCHF_SPT	
BYNRUB_TOD, BYNRUB_TOM	
GBPRUB_TOD, GBPRUB_TOM	
HKDRUB_TOD, HKDRUB_TOM	
USDKZT_TOD, USDKZT_TOM, USDKZT_SPT	
USDTRY_TOD, USDTRY_TOM, USDTRY_SPT	1,00%
USDJPY_TOD, USDJPY_TOM, USDJPY_SPT	1,0070
KZTRUB_TOD, KZTRUB_TOM, KZTRUB_SPT	
TRYRUB_TOD, TRYRUB_TOM	
CHFRUB_TOD, CHFRUB_TOM	
JPYRUB_TOD, JPYRUB_TOM	

2. The reporting documents

2.1. Name of files with electronic documents (ED) in XML format.

Format: files in the XML format (ED – a document signed by the digital signature);

Name: *MMNNNNN_TTTTT_SSS_DDMMYY_NNNNNNNNNNNNnnnl.p7s.zip.p7e* with the following parameters:

MMNNNN – the Trading member code in the electronic document circulation system (the SEDC) – the first 7 symbols of the Trading Member registration code.

TTTTT – the ED type consisting of 5 symbols (it can take on values specified in the text below);

SSS – the session code consisting of 3 symbols or an ordinal number of the session;

DDMMYY – a reporting date of the document;

NNNNNNNN – a unique number of an ED consisting of 8 symbols.

"Xml" shall mean a standard extension of an XML file, "p7s" shall mean a standard extension of a file signed with a digital signature in the SEDC, "zip" is a standard extension of the archived file, "p7e" is a standard extension of the encrypted file.

2.2. Extract from Orders Register

Example of a file's name: MB12345_CUX22_000_031011_12345678.xml

The session code (parameter SSS in the file's name) shall always take the value 000.

Files in the form of (electronic document) ED shall be formed and sent at the request of the Trading member through the SEDC.

2.2.1. THE FORM

Order type	"OrderType" field values in the "CUX22" report				
Order book limit order type "place in queue", execution at different rates	LS				
Order book limit order type "withdraw balance", filling at different rates	LSW				
Order book limit order type "fill or kill", filling at different rates					
Order book market order type "place in queue", filling at different rates	MS				
Order book market order type "fill or kill", filling at different rates	MSN				
Off book order to execute negotiated trades; order to execute an order book trade of the "To all" type; order to execute a trade of the "auction" type	NO				
VWAP order "withdraw balance", filling at different rates	WSW				
VWAP order "fill or kill", filling at different rates	WSN				

The "hide amount" type is eligible for order book limit orders (except for fix trades).

Book orders of the 'To all' type are not permitted for execution of fix trades.

VWAP orders are possible to use only for USDRUD_TOM instrument.

2.3. Extract from the trade register

The file's name example: *MB12345_CUX23_D01_031011_12345678.xml*

The session code (the parameter SSS in the file's name) shall take the following values: **DNN/MNN** depending on following:

DNN: the report is delivered to Trading members after the end of the trading for instruments with settlement date coinciding with the trade execution date, and /or to Trading members who sent an Early Settlement Standing Instruction or an Early Settlement Request to the Clearing Centre pursuant to the Clearing rules (NN – an ordinal number of the session),

MNN: the report is delivered to Trading members after 19:00 (after 18:00 to Trading members who sent an Early Settlement Standing Instruction or an Early Settlement Request to the Clearing Centre) upon the end of the trading for instruments with settlement date following the trade execution date, and/or to Trading members who sent a Request for early completion of trading with the Clearing Center or a Standing instruction for early completion of trading with the Clearing Center to the Clearing Centre pursuant to the Clearing rules (NN – an ordinal number of the session),
